

## Mission

LIWACOM is a deeply specialized technology enterprise located in Essen, Germany. Since its foundation in 1988, the company has steadily focused on simulation software solutions for the natural gas industry, known as the SIMONE pipeline simulator. SIMONE is a seamlessly integrated standard software package for all kinds of simulation applications for system design, capacity determination, real-time use in control rooms, and for thermal billing.

**LIWACOM has achieved the market leading position in Europe, and the company is among the top players worldwide.**

LIWACOM business policy distinctively focusses on the SIMONE standard software package. We develop product releases, sell software licenses, and offer a complete range of services around the SIMONE product. We strive to keep the product always at the top of the technology. We market SIMONE as high-end product.

SIMONE is an open product, available to any system integrator without preference or discrimination. We leave room to OEMs to add their own services. This business strategy has led to fruitful co-operations with a number of system integrators avoiding project-specific risks.

LIWACOM has allied with SIMONE Research Group of Prague/Czech Republic, and we share product development and sales under a co-operation agreement. Together with our partner in Prague we organize the bi-annual international SIMONE Congress that usually draws close to 100 delegates.

Around the year we are on several technical conferences with papers about specific topics of simulation. We are an active member of the Pipeline Simulation Interest Group (PSIG) and do regularly participate in their annual conferences. Last not least, the support of our customers is an important marketing factor, since our business niche is very specialized.
